“Aphid is taking the workforce economy from horse and buggy to the electric car overnight.”

## Introduction

# Automation For The Everyday Person

The Workforce Leveraging System™ (WLS) is a business model and process that allows people to monetize based on the efforts of bots they control.

The digitalization of a human persona into multiple clones is the step towards transitioning from analog to digital. The WLS takes the workforce economy from horse and buggy to the electric car overnight. A disruptive idea needs to be transformative. We aim to leverage emerging technologies to build new consumer services, business systems, business models, and employee experiences. Our vision is to be the nexus of Digital Transformation to develop a self-sustaining and self-sufficient ecosystem. Aphid is an ecosystem that is capable of supporting a global user-base that consists of both consumers and innovators. Both sides of the spectrum are incentivized for activity in the ecosystem which will promote a growth loop.

## Overview

# How It Works

Aphid gives people access to Artificial Intelligence tools through an open-source marketplace that will help them save time on repetitive tasks and create supplemental income through a no-code, user-friendly interface. Aphid users (Controllers) assign automated plugins to their digital bots (aClones) and receive same-day payouts when their bots complete tasks for them. Use case examples range from a variety of categories such as automated trading, e-commerce customer support, and more. Controllers will have access to a dashboard in the Aphid mobile app and web portal to view earnings from plugins and the amount of time saved from autonomous tasks.

## Overview

# Why Clone Ourselves?

Artificial Intelligence and Blockchain are the technologies that power the system, but the spirit lives in the colony. The concept of the WLS derives from observation of the job economy demanding strenuous working hours. Posing the statement from Chief Executive Officer of Aphid, Brandon Cooper, “I wish I could clone myself and have it work for me.” That wish became a reality with the power of Artificial Intelligence.

We live a cyclical, fast-paced life where we prioritize our obligations more than the activities we desire. In the end, we neglect to invest our time in endeavors that provide us with joy and miss out on spending time with friends and family such as attending our child’s soccer game.

With a rapid development lifecycle, we have built a solution that follows the idea that the human user constructs and automatically works on improving itself and suggesting iterations to create a more efficient and satisfactory result.

# Another You Works For You

## Overview

# aph-ID

aph-ID is your universal login system to access your collection of aClones. Think of aph-ID as your “swiss army knife” of automation across the internet.

Key features:

- Decentralized data storage on IPFS
- Connect to websites across the internet to automate decisions
- Store your aClone NFT's
- Universal Metaverse Avatar

## The Bot Ecosystem

# Control Panel | Mobile App

The Aphid mobile app allows controllers to manage their account from the palm of their hand, whilst the web portal Control Panel (cPanel) includes advanced features such as plugin management, bot skill sets, dialogues, certificates, and more. Track the analytics of all your sales activity and time saved from manual labor.

# The Bot Ecosystem

## Aptera

Aptera is the marketplace for Controllers. Both Aphid and external developers worldwide create automated bots, plugins, templates, and skill sets for the Aphid Ecosystem. The developer of the add-on chooses where the data is stored.

## A New Digital Economy

# Powered By aBion

The aBion is the native utility token used to power automation on The Workforce Leveraging System Ledger (WLS). The aBion derives from the word Bionic which usually is defined as artificial devices assisting humans. The letter “a” in aBion is short for Artificial Intelligence and automation.

Controllers use aBion tokens to power actions of aClones in the network. In the Aphid ecosystem, Controllers may use aBion tokens to increase task summoning for their aClones.

# A New Digital Economy

## Community

The ideal success scenario of Aphid can be measured in the total time saved for people leveraging the efforts of aClones. The Controller can then capitalize on the time saved.

We want to incentivize the creators, algorithm scientists, engineers, and open source contributors to drive adoption for the aBion. The aBion has real world utility that powers the Web3 ecosystem.

The Future

## Same Day Pay

Controllers receive earnings, rewards, or tips in the currency used for the completed transaction. Get paid same day opposed to bi-weekly pay at a regular job.

## The Future

## Who We Are

We are a group of passionate technologists, marketers, designers, and blockchain enthusiasts that have come together to build a future powered by automation that helps give people back their most valuable resource – time.

## Business Solutions

Small and Medium-Sized Businesses (SMB's) and large enterprises will utilize Aphid's Artificial Intelligence, Machine Learning, and Deep Learning automation solutions to provide customer support, increase sales, reduce operational costs, and collect qualitative data to enhance business operations.
